RICOCHET ASSOCIATION TRANSFORMATION | mailchimp

Why does my association's AMS data sync with Mailchimp fail?

It's rarely the technology

Most failed AMS syncs aren't a technology problem. The connection runs, but nobody owns it, nobody watches it and nobody trusts what it sends. Use this punch list to find the gaps at your association.

WHY AMS DATA SYNCS FAIL, AND HOW RICOCHET HELPS

Why it fails	How the Ricochet AMS Connector helps
PEOPLE	
Nobody owns it	Automated alerts go to your owner.
Nobody watches it	Error logging and automated alerts on every sync.
Marketing doesn't know what's synced	You tell us what data to move. Thirty standard fields arrive ready to use.
DATA	
It wasn't the sync. The AMS data is bad	Rules set during setup keep bad records from piling up.
Poor labels	Thirty standard fields with clear names.
Fields weren't chosen for business needs	Activity becomes tags in five categories you can segment on.
AMS fields were renamed or changed	Email support from our integration team.
MONITORING	
Errors pile up unread	A failed sync retries at the next scheduled run.
No hygiene checks, so everyone assumes it's fine	Automated alerts when a sync fails.
It syncs changes only, with no true-up	A monthly true-up of every record.
Members don't match	Every record matches on your AMS Member ID.

RICOCHET ASSOCIATION TRANSFORMATION **Why work with Ricochet?**

Deep bench
Specialists in marketing, membership, project management, data, systems integration and AI.

Fluent in your stack
Hands-on with the marketing automation, AMS and AI platforms associations use, so we fit each to your goals.

Been in your seat
We have worked on association staff and consulted with dozens of associations. Many of us hold industry credentials.

For 10 years, Ricochet has worked only with professional and trade associations on marketing, communications, technology and data. Chief Consultant Chris Gloede, CAE, was the first Chief Marketing Officer of the American Bar Association.
